

# Silicone Rubber Keypads

Tanfel offers silicone rubber and plastic keypads / keyboards for use in computers, mobile phones, data organizers, calculators, remote controls and numerous other items. Once you give us a concept, we can design and produce a high quality and low-cost conductive rubber pad that precisely meets your needs. You can choose from a complete range of key-stroke / travel, actuation force and tactile response from firm to soft. Key size and location and a variety of key-top styles with printing options are all available. We specialize in various types of standard and conductive keypads. Silicone rubber keypads can be co-molded with silicone conductive pills (carbon, gold or metal).
